## HP6282 – Powerglide Trans-Brake Kit

### \*UPDATE\*

Hughes Performance will no longer be supplying the shift detent arm with our HP6282 Powerglide trans-Brake Kits. This must be removed from your existing valve body and transferred to the new unit. Locate the shift detent arm on your valve body, remove the circlip from the shaft and remove shift detent arm (Figure 1). Reinstall shift detent arm on new valve body and secure with circlip.
